

Agreement with Boeing to Cooperate for Sustainable Aerospace

Nabtesco Corporation (Head Office: Chiyoda-ku, Tokyo; President: Kazumasa Kimura) signed a Commemorative Certificate with The Boeing Company (hereinafter "Boeing") at the Paris Air Show to expand the scope of cooperation on continuous actuation technology development with the aim of creating new added value for existing and future development airplanes

The Certificate was executed with the aim to collaborate more closely with Boeing, one of the world's leading aerospace companies, to decarbonize the aerospace industry by 2050, mainly in the field of flight control, which is the core domain of Nabtesco Aerospace Company, and to create industry-leading new technologies and solutions. By maximizing the use of technology and production expertise that each company has accumulated over the years, we will work together to promote environmentally progressive technologies and airplanes that meet CO₂ emissions standards, in addition to studying ways to improve the efficiency of processes from development to production.

Nabtesco Corporation has built a strong partnership with Boeing for more than 45 years. In order to implement the Innovation in Action set forth in our Long-Term Vision, we will continue to work with our valued customers to develop various technologies for the future of the aerospace industry in a sustainable manner.

■About Nabtesco <https://www.nabtesco.com/en/>

Nabtesco was established through the integration of Teijin Seiki Co., Ltd. and NABCO Ltd. in 2003. It is a manufacturer of machine components, and with its unique motion control technology, supports the automation of manufacturing sites as well as safe, secure and comfortable land, sea and air transportation. In the aircraft equipment business, Nabtesco provides flight control actuation systems that control the flying position of aircraft and various equipment to aircraft manufacturers in Japan and overseas. The company also provides after-sales services mainly to airlines around the world, contributing to the safe operation of aircraft. Production bases are located in Fuwa-gun, Gifu Prefecture, Japan and Washington State, U.S.A.
